

SAP FIELDGLASS AND MICROSOFT OFFICE 365

REDEFINING PRODUCTIVITY

SAP Fieldglass is excited to share in the powerful partnership between Microsoft and SAP by integrating our industry-leading Vendor Management System (VMS) with Microsoft Office 365 applications. The integration redefines productivity for business users by allowing them to connect in the cloud, simplifying the procurement and management of the external workforce.

“2016 marks a milestone in our longstanding partnership with Microsoft. We’ve listened closely to our customers as they drive their businesses to the cloud, and we’re pleased to address them with the rich combination of SAP public cloud solutions and Microsoft Office 365, along with enhanced mobile productivity.”
 —Bill McDermott, Chief Executive Officer, SAP

About SAP Fieldglass

SAP Fieldglass provides the industry’s leading cloud technology for services procurement and external workforce management. More than 400 global businesses leverage SAP Fieldglass’ intuitive Vendor Management System (VMS) to gain visibility into its external labor, project-based services including Statements of Work (SOWs), independent contractors and additional flexible talent pools.

Integration and Benefits

We are working with Microsoft to deliver enhanced functionality that empowers users to take quick and seamless action by leveraging the power of the Microsoft Office platform. The first phase of the integration, the SAP Fieldglass Office Add-In for Work Items, will be available in Q3 2016. This integration allows users to review and act upon requests to approve work items directly from Outlook, rather than logging into SAP Fieldglass each time. They can initiate hiring workflows from within Outlook and perform other tasks, including job postings, contract terms and extensions, timesheets and SOWs.

Key benefits of the integration:

- Enhanced user experience
- Increased productivity
- Faster approval cycle times with full visibility into transaction details

Additional planned integration functionality includes Outlook calendar interview scheduling and real-time collaboration and redlining on contracts and SOWs within Microsoft Word and Excel.
